## Mozilla Thunderbird

1. Click on the **Display Thunderbird menu** icon
2. On the menu that loads go to **Preferences** and select **Accounts Settings**
3. From the **Account Actions** drop down menu select **Add Mail Account**
4. Now type in **Your Name, Email address** and **Password** and press **Continue** (press manual-config if it takes a while)
5. Make sure for incoming server **IMAP** is selected
6. For incoming and outgoing **Server hostname** use mail.iwantwireless.ca or mail.serbernet.com
7. For SSL, select **STARTTLS** for both incoming and outgoing
8. Verify that the incoming port is **993**
9. Verify that the outgoing port is **587**
10. For **Username** Use your full email address
11. Click on **Re-test**, if it works click on **Done** otherwise review your settings
